

## KEY HEADLINES:

- The dollar was little changed and off session lows on Wednesday as investors focused on a European Central Bank meeting and the upcoming U.S. consumer price index report to help gauge the current pace of the economic recovery.
- The U.S. Labor Department's consumer prices data has been much anticipated after last month's report showed consumer prices increased by the most in nearly 12 years in April, fueling the view that higher prices could last longer than some anticipate. Economists polled by Reuters forecast the CPI advanced 0.4% in May.
- Earlier, Chinese producer price data for May showed the biggest jump in a dozen years, and the country's consumer prices rose 1.3% in May - the biggest year-on-year increase in eight months - but below expectations.
- The Bank of Canada on Wednesday left its key interest rate unchanged as expected, and said it would maintain its current policy of quantitative easing. It also reiterated its guidance that rates would remain unchanged until at least the second half of 2022.
- The dollar index was last up 0.03% at 90.14, with the euro also nearly unchanged at \$1.2176.
- Deutsche Bank's Currency Volatility Index hit its lowest level since February 2020 on Tuesday, and slipped further on Wednesday.
- Bitcoin recovered from a three-week low it hit on Tuesday when signs of institutional investor caution and regulatory attention drove selling. It was last up 8% at \$36,114.
